

Two standard normal functions according to Gauß

Density function $\phi(u)$ compare with CIE luminance contrast $L/\Delta L$

$$\phi(u) = \frac{2}{\sqrt{2\pi}} \cdot e^{-(1/2) \cdot u^2} \quad (-\infty < u < \infty) \quad [1]$$

Distribution function $\phi(u)$ corresponds to the CIE lightness L^*

$$\phi(u) = \frac{2}{\sqrt{2\pi}} \int_{-\infty}^u e^{-(1/2) \cdot t^2} dt \quad -1,0 \phi(u) \quad [2]$$
