

At the CIE meeting in South Africa, June 2011, **CIE Division 1** decided to establish the Reportership **CIE R1-57 Border between Luminous and Blackish Colours** by *Thorstein Seim (Norway)* in response to the resolution 18/2009 of ISO/IEC JTC1/SC28.

In addition **CIE Division 8** decided to establish the Reportership **CIE R8-09 Output Linearization Methods for Displays and Printers** by *Klaus Richter (Germany)* in response to the same resolution 18/2009 of ISO/IEC JTC1/SC28.

Both reports **CIE R1-57** and **CIE R8-09** have relations and may appear during 2013 at the CIE web site.

Possible Result: Definition of a device-independent visual RGB*_c system as response to the request of SC28.

All surface colours define a hue circle of maximum chroma located within the CIE (x,y) chromaticity diagram. CIELAB chroma C^*_{ab} and lightness L^* of this circle as function of hue h_{ab} serves as reference points of a device-independent visual RGB*_c system (compare the reference C^*_{ab} , L^* hue circle of the NCS system).
