

TUB-test chart CES0; Special colorimetric properties for colour vision and image technology
Comparison CIELAB and IECsRGB coordinates, lightness & triangle lightness, contrast and sensitivity

LABJND lightness L^* , tristimulus value discrimination dY ,
contrast (Y/dY), and sensitivity (dY/Y)

LABJND lightness for all colours, $L^*=50$ for $Y=18$
 $L^* = S_{\text{lab}} \cdot Y_a^{1/3}$ ($Y_a=100, Y>1$)

For the grey discrimination we get:
 $dL^*/dY = (116/Y_a)^{1/3} \cdot (13/Y_a)^{-2/3}$

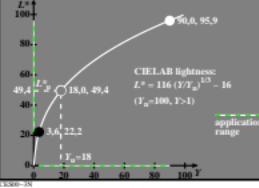

and for $dY/dY=1$ (about 3 thresholds) we can write:
 $dY = 3(Y_a/116) \cdot (13/Y_a)^{2/3}$

or $\log(dY) = \log(3(Y_a/116)) + (2/3)\log(Y/Y_a)$
therefore in a log-log diagram the slope is (2/3).

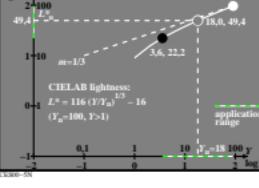

for the CIE contrast sensitivity, and for $dL^*=1$ it is valid:
 $Y/dY = (1/3)(116/Y_a)^{1/3} \cdot Y^{1/3}$

or $\log(Y/dY) = \log(1/3)(116/Y_a)^{1/3}) + (1/3)\log(Y/Y_a)$

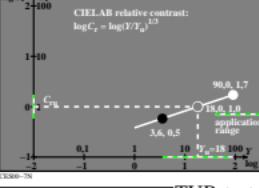

CIELAB lightness L^* as function of CIE tristimulus value Y
coordinates L^* and Y for achromatic colours

CIELAB lightness L^* as function of $\log Y$
coordinates $\log L^*$ and $\log Y$ for achromatic colours

$\log C_p = \log(\Delta Y/\Delta Y_p)(Y/\Delta Y_p)$ relative CIE contrast
coordinates $\log C_p$ and $\log Y$ for achromatic colours

CIELAB lightness L^* , CIE tristimulus value discrimination
 dY and CIE contrast sensitivity (Y/dY)

CIELAB lightness for all colours $L^*=100$:

$$L^* = 116 \cdot (Y/Y_a)^{1/3} - 16 \quad (Y_a=100, Y>1)$$

For the grey discrimination we get:
 $dL^*/dY = (116/Y_a)^{1/3} \cdot (13/Y_a)^{-2/3}$

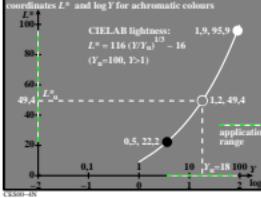

and for $dY/dY=1$ (about 3 thresholds) we can write:
 $dY = 3(Y_a/116) \cdot (116/Y_a)^{2/3}$

or $\log(dY) = \log(3(Y_a/116)) + (2/3)\log(Y/Y_a)$
therefore in a log-log diagram the slope is (2/3).

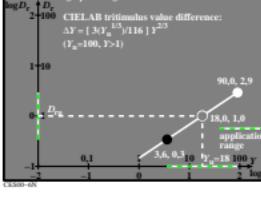

for the CIE contrast sensitivity, and for $dL^*=1$ it is valid:
 $Y/dY = (1/3)(116/Y_a)^{1/3} \cdot Y^{1/3}$

or $\log(Y/dY) = \log(1/3)(116/Y_a)^{1/3}) + (1/3)\log(Y/Y_a)$

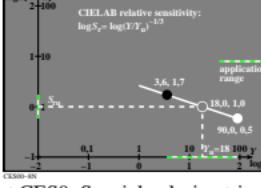

CIELAB lightness L^* as function of $\log Y$
coordinates L^* and $\log Y$ for achromatic colours

CIELAB lightness L^* as function of $\log Y$
coordinates $\log L^*$ and $\log Y$ for achromatic colours

$\log S_p = \log(\Delta Y/\Delta Y_p)(Y/\Delta Y_p)$ relative CIE sensitivity
coordinates $\log S_p$ and $\log Y$ for achromatic colours

sRGB-triangle lightness T^* , CIE tristimulus value discrimination
 dY and CIE contrast (Y/dY)

sRGB-triangle lightness for all colours $L^*=100$:

$$T^* = 116 \cdot (Y/Y_a)^{1/2.4} - 16 \quad (Y_a=100, Y>1)$$

For the grey discrimination we get:
 $dL^*/dY = (112.4/Y_a)^{1/2.4} \cdot (1.4/2.4)^{-1/2.4} = 0.42 \cdot (Y/Y_a)^{-0.5/2.4}$

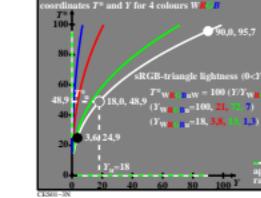

and for $dY/dY=1$ (about 3 thresholds) we can write:
 $dY = 2.4 \cdot (Y_a/116) \cdot (1.4/2.4)^{2/2.4}$

or $\log(dY) = \log(2.4) + (1/2.4)\log(Y/Y_a)$
therefore in a log-log diagram the slope is 1/2.4.

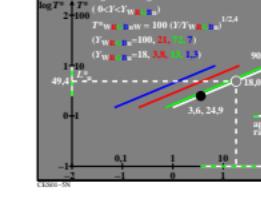

for the CIE contrast sensitivity, and for $dL^*=1$ it is valid:
 $Y/dY = (1/2.4)(116/Y_a)^{1/2.4} \cdot Y^{1/2.4}$

or $\log(Y/dY) = \log(1/2.4)(116/Y_a)^{1/2.4}) + (1/2.4)\log(Y/Y_a)$

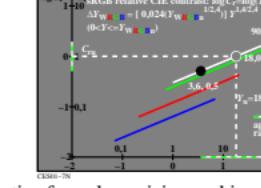

CIELAB lightness L^* as function of CIE tristimulus value Y
coordinates L^* and Y for 4 colours $W\text{--}R\text{--}B\text{--}M$

CIELAB lightness L^* as function of $\log Y$
coordinates $\log L^*$ and $\log Y$ for 4 colours $W\text{--}R\text{--}B\text{--}M$

$\log S_p = \log(\Delta Y/\Delta Y_p)(Y/\Delta Y_p)$ relative CIE sensitivity
coordinates $\log S_p$ and $\log Y$ for 4 colours $W\text{--}R\text{--}B\text{--}M$

sRGB-triangle lightness T^* , CIE tristimulus value discrimination
 dY and CIE contrast (Y/dY)

sRGB-triangle lightness for achromatic colours W :

$$T^* = 116 \cdot (Y/Y_a)^{1/2.4} \quad (Y_a=100, Y>1)$$

For the grey discrimination we get:
 $dL^*/dY = (112.4/Y_a)^{1/2.4} \cdot (1.4/2.4)^{-1/2.4} = 0.42 \cdot (Y/Y_a)^{-0.5/2.4}$

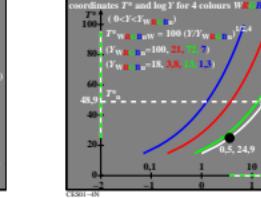

and for $dY/dY=1$ (about 3 thresholds) we can write:
 $dY = 2.4 \cdot (Y_a/116) \cdot (1.4/2.4)^{2/2.4}$

or $\log(dY) = \log(2.4) + (1/2.4)\log(Y/Y_a)$
therefore in a log-log diagram the slope is 1/2.4.

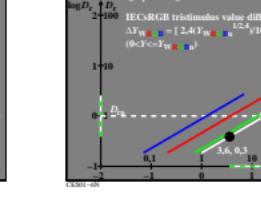

for the CIE contrast sensitivity, and for $dL^*=1$ it is valid:
 $Y/dY = (1/2.4)(116/Y_a)^{1/2.4} \cdot Y^{1/2.4}$

or $\log(Y/dY) = \log(1/2.4)(116/Y_a)^{1/2.4}) + (1/2.4)\log(Y/Y_a)$

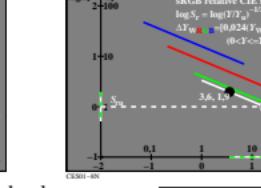

CIELAB lightness L^* as function of $\log Y$
coordinates $\log L^*$ and $\log Y$ for 4 colours $W\text{--}R\text{--}B\text{--}M$

CIELAB lightness L^* as function of $\log Y$
coordinates $\log L^*$ and $\log Y$ for 4 colours $W\text{--}R\text{--}B\text{--}M$

$\log S_p = \log(\Delta Y/\Delta Y_p)(Y/\Delta Y_p)$ relative CIE sensitivity
coordinates $\log S_p$ and $\log Y$ for 4 colours $W\text{--}R\text{--}B\text{--}M$
