

Figure 1 displays 16 plots showing the relative difference of LABINDus relative to the standard model, arranged in a 4x4 grid. The rows represent different parameters: LABINDus relative difference of LABINDus, LABINDus relative difference of LABINDus, LABINDus relative difference of LABINDus, and LABINDus relative difference of LABINDus. The columns represent different parameters: LABINDus relative difference of LABINDus, LABINDus relative difference of LABINDus, LABINDus relative difference of LABINDus, and LABINDus relative difference of LABINDus. Each plot shows the relative difference of LABINDus relative to the standard model as a function of log(T) and log(Y). The plots are arranged in a 4x4 grid, with each plot showing the relative difference of LABINDus relative to the standard model as a function of log(T) and log(Y).
