At the CIE meeting in South Africa, June 2011, ***CIE Division 1*** decided to establish the Reportership
CIE R1−57 Border between Luminous and Blackish Colours by *Thorstein Seim (Norway)*
in response to the resolution 18/2009 of ISO/IEC JTC1/SC28.

In addition ***CIE Division 8*** decided to establish the Reportership
CIE R8−09 Output Linearization Methods for Displays and Printers by *Klaus Richter (Germany)*
in response to the same resolution 18/2009 of ISO/IEC JTC1/SC28.

Both reports **CIE R1−57** and **CIE R8−09** have relations and may appear during 2013 at the CIE web site.

Possible Result: Definition of a *device−independent visual RGB*$^*_e$ system as response to the request of SC28.
All surface colours define a hue circle of maximum chroma located within the CIE *(x,y)* chromaticity diagram.
CIELAB chroma C^*_{ab} and lightness L^* of this circle as function of hue h_{ab} serves as reference points
of a *device−independent visual* RGB^*_e ***system*** (compare the reference C^*_{ab}, L^* hue circle of the *NCS* system).
