Graph showing the transmission coefficient S_d (Y-axis, ranging from -1 to 1) versus the normalized frequency u (X-axis, ranging from -3.1 to 2.9) and the wavelength λ/nm (X-axis, ranging from 400 to 700 nm). The curves represent the transmission coefficient for different values of the parameter S_d . The curves intersect at $u = 0$ and $\lambda/\text{nm} = 555$. The text "Schwelle $S_d = 0,025$ $\log S_d = -1,6$ " is present in the top right corner.
