Line-element examples for grey samples
$$(0,2 \le Y_r \le 5)$$

 $F_u(Y_r)$ is called the line-element function of $f_u(Y_r)$.
Both functions are normalized to the surround value:
 $\frac{d[F_u(Y_r)]}{dY_r} = f_u(Y_r)$ [1]
 $F_u(Y_r) = \int \frac{f'_u(Y_r)}{f_u(Y_r)} dY_r$ [2]

Example for the normalized functions with Y_r=1:

$$F_{\mathrm{u}}(Y_{\mathrm{r}}) = \frac{F(Y_{\mathrm{r}})}{F(I)} = \frac{\ln(1+\mathbf{b}Y_{\mathrm{r}})}{\ln(1+\mathbf{b})}$$
[3]
$$f_{\mathrm{u}}(Y_{\mathrm{r}}) = \frac{f(Y_{\mathrm{r}})}{f(I)} = \frac{1+\mathbf{b}Y_{\mathrm{r}}}{1+\mathbf{b}}$$
[4]
