

her60-7a, image 3, produce equal visual difference between four of nine steps

her60-7n

 $\begin{array}{l} \text{equally spaced} \\ 0 <= rgb*_{\text{in}} <= 1 \end{array}$

Input (9 steps)

her60-8a, image 4, adjust visual threshold (+0,04?) of 9 steps; all equal?

grey example difference visible?

c1=0,12 c2=0,25 c3=0,37 c4=0,50 c5=0,62 c6=0,75 c7=0,87 1,00

adjust and proof threshold of

the linearized output restart with image 1

0,25 ±0,06 ♦ adjust threshold 0,25 ±0,00 ♦ no change
